By Hicham and Mohamed Ibnalkadi

Cryptocurrencies are digital or virtual currencies that use cryptography for security. They are not backed by any central bank or government, and they are not legal tender in any country. However, cryptocurrencies are gaining popularity as an investment and a way to send and receive payments.

Bitcoin is the first and most well-known cryptocurrency. It was created in 2009 by an unknown person or group of people using the name Satoshi Nakamoto. Bitcoin is based on a blockchain, which is a distributed database that records all transactions.

Other cryptocurrencies, such as Ethereum, Litecoin, and Ripple, have been created since Bitcoin. These cryptocurrencies have different features and

use cases, but they all share the common characteristic of being decentralized and not backed by any central authority.

Cryptocurrencies are a new and rapidly evolving technology. There is still a lot of uncertainty about their future, but they have the potential to revolutionize the way we send and receive payments, invest, and store wealth.

What's in this book?

This book is the ultimate guide to understanding and investing in the world of cryptocurrencies. It covers everything you need to know about Bitcoin and other digital currencies, from the basics to the latest advancements.

In this book, you will learn:
