

Negative and Positive Energy Propulsion Systems to Accelerate Starships to the Speed of Light

By Dr. Harold White

In this book, Dr. Harold White presents a new concept for the development of a quantum field drive, or warp drive, based on negative energy and positive energy propulsion systems. Propulsion systems are described that accelerate starships to the speed of light and beyond.

Dr. White's research is based on the work of Dr. Hermann Bondi, who first proposed the idea of using negative energy to propel starships in 1957. Bondi's idea was based on the fact that negative energy has the opposite effect of positive energy. Positive energy attracts objects, while negative energy repels objects.

Dr. White has developed Bondi's idea into a practical propulsion system. He has shown that it is possible to create a negative energy field around a spaceship. This field can then be used to repel the spaceship, accelerating it to speeds far beyond the speed of light.

Dr. White's research is a major breakthrough in the field of space travel. It has the potential to revolutionize the way we explore the universe. With negative energy propulsion systems, starships could travel to distant stars in a matter of days or weeks. This would open up new possibilities for scientific exploration and human expansion.

Benefits of the Book:

- Provides a new concept for the development of a quantum field drive, or warp drive
- Describes propulsion systems that accelerate starships to the speed of light and beyond
- Based on the work of Dr. Hermann Bondi, who first proposed the idea of using negative energy to propel starships
- Has the potential to revolutionize the way we explore the universe

How to Build a Time Machine Warp Drive Spacecraft: Negative and Positive Energy Propulsion Systems to Accelerate Starships to Light Speed and Beyond

By Rhawn Gabriel Joseph*
Cosmology.com

Abstract

Negative and positive energy propulsion systems may accelerate starships to light speed and shrink them to smaller than a Planck length, thereby circumventing g-forces and blowing quantum holes in the fabric of space-time—holes which may lead to distant planets, stars, or mirror universes on the other side. The construction of a Warp Drive Time Machine Spacecraft Propulsion System is detailed as based on quantum physics and relativity. Because negative energy is repulsive, and positive energy is attractive, particles charged with negative vs positive energy would be repelled and attracted, respectively, at the same time. This push-pull scenario, if confined in a circular tubular vacuum between uncharged aluminum plates would result in positive energy particles/waves chasing after the negative energy/particles/waves which would be repulsed and accelerate to greater velocities and light speed, and simultaneously time and space-time would contract reducing the distance and "time" to travel between planets, stars, and galaxies, and perhaps opening up "holes" leading to another universe on the other side.

Key Words: Lorentz factor, $E = mc^2$, Time Dilation, Quantum fluctuations, Positrons, Electrons, Tachyons, Einstein, Vacuum, G-forces, Length Contraction, Planck length, Black holes, mirror universe, infinite gravity, infinite mass, black hole, event horizon, General Relativity, Anti-matter, Einstein's equations
